EDUCATION

Level Design Mastery – Certificate of Completion | Feb. 2026 – May 2026
Stefan Zamfir. Layout planning, blackout workflows, encounter pacing, and player-centred level design.

ESI: Escuela Superior Internacional | 2012 – 2016

Four-year degree in Game Design & Development, covering game design, level design, prototyping in Unity and AS3, code architecture in C/C++/C# and JavaScript, rigging, 3D modelling, and animation.

IES Ingeniero de la Cierva | 2010 – 2012

DAI: Software Application Development
Two-year higher vocational programme focused on computer science and programming: application architecture and design patterns using JavaScript, SQL, Python, and Android.

LUDOGRAPHY

EA Sports

- EA SPORTS PGA TOUR
- Madden NFL 25
- Madden NFL 26
- Madden NFL 27

TWS Inventors of Play

- Gold Rush Gus
- 777 Deluxe
- Cyberpunk City
- Gods Of Luxor
- Teen Patti
- Andar Bahar
- Wheel of Fortune
- Cricket Legends
- Zombie Soccer
- Mystic Elements
- A Night with Cleo

Genera Games

- The Little Prince
- Runbot
- Xtreme Racing 2
- Skull Towers

PROFESSIONAL EXPERIENCE

EA Sports – Madrid, Spain

Senior Game Designer | Jul. 2021 – Jul. 2026

- My experience at EA Sports is defined by four projects I developed at the Madrid studio: EA SPORTS PGA TOUR: Road to the Masters and Superstar for Madden NFL 25, 26, and 27. These projects shared one key direction: making the player's sports fantasy as unique and immersive as possible through narrative systems and RPG progression.
- My first three years of development focused on PGA TOUR and its launch:
 - The Madrid design team consisted of just **two designers**: my Lead and me, with responsibility for the game's entire design scope. The project was developed fully **remotely** over three years.
 - My responsibilities as a designer included end-to-end ownership of the **progression** system; XP and in-game economy **balancing** using custom formulas; development of Quest, Challenge, Tournament, and Live Battle Pass systems; and all the content supporting each of these systems.
 - Expanded the golfer's **RPG skill system**, connecting progression choices to the **builds** players could create throughout their careers.
 - Designed **gameplay systems** and UI for ball striking, defining how the new shot interactions worked and how their states and feedback were communicated to the player.
 - Supported the game throughout Live Services by creating recurring seasons through the **Battle Pass** system I developed.
- During my final year on PGA TOUR, I collaborated on Superstar for Madden NFL 25 for nearly its entire production cycle:
 - Worked on the **progression** systems through launch. These systems enabled players to create customised builds through their choice of **archetype**.
 - Helped oversee the XP economy system, which allowed players not only to level up their characters, but also to unlock new abilities within their chosen archetype using **currencies** such as Skill Points.
- On Superstar for Madden NFL 26, I contributed throughout the full cycle, from **pre-production** through the entire **Live Services** period:
 - Designed **Sphere of Influence**: an **RPG** system whose main purpose was to **forge relationships** with every character encountered throughout the player's career, shaped by the decisions and actions taken across their story. This enabled **replayability**, unlocked new rewards through each character's **trust level** within the player's sphere of influence, and determined the **narrative path** available based on how those decisions affected each character.
 - After launch, I spent the entire Live Services period developing **events** for Superstar Showdown and their **reward systems**, while expanding the character-level system through the release of the next title.
- Superstar for Madden NFL 27 introduced significant changes to several existing gameplay systems, alongside new systems designed to create a clear **difference** from the previous title:
 - Battle Pass: A system that allowed me to create a complete content package across twelve seasons distributed throughout the year. It **centralised** the content from every gameplay system and the connections between them. Its key features included premium and free Battle Pass tracks and rewards; Quests and new missions; new Showdown events; new Sphere of Influence characters; and more.
 - Sphere of Influence: A major update introducing new features with a deeper impact on the characters within the player's circle and the different **narrative paths** available to them.
 - Side Activities: A purely narrative dialogue-choice system. It allowed players to determine which characters were affected by each **response**, potentially **strengthening** or damaging relationships, unlocking new ones, or losing them entirely. This content was postponed to Superstar for Madden NFL 28.
- Across all four projects, I followed a similar development process to bring each of my designs to life:
 - Built scalable pipelines for each system and its content using **Frostbite** and Perforce, SQL, Excel, custom tools, and structured GDDs that made the systems easier to understand and supported collaboration across production, engineering, and QA.
- Selected Titles: EA SPORTS PGA TOUR: Road to the Masters and Madden NFL 26.

TWS Inventors of Play – Málaga, Spain

Game Designer | Dec. 2017 – Jun. 2020

- During this stage of my career, I focused my **creative efforts** on creating **casino** games across **slot**, **card**, and **roulette** formats. The creative direction was grounded in **innovation**: creating new games built around new **systems** and **RNG** models for any casino genre, whether card game, roulette, or slot game.
- My work across TWS projects followed this structure:
 - Designed systems for **slots** and casino games using **probability** models, player-behaviour **research**, and market constraints.
 - Developed **prototypes** in **Unity** with Git (SourceTree) and C# simulation tools to validate **mathematical profiles**, feasibility, pacing, and balance.
 - Created GDD templates to define every game's **rules** and **behaviour**: core gameplay flows, feature rules, reward logic, and implementation requirements.
 - Collaborated with **mathematicians**, **backend** developers, and **artists** to turn **abstract** concepts into playable systems.
 - As the team's only designer alongside my Creative Director, I had the opportunity to take **responsibility** for the design of all **eleven titles** published during my time at the company.
- Selected Titles: Gods of Luxor, Gold Rush Gus, 777 Deluxe, Cyberpunk City, A Night with Cleo, and Andar Bahar.

Genera Games – Seville, Spain

Junior Game Designer | Oct. 2015 – Jun. 2017

- This period focused primarily on bringing the company's existing IPs back to market through major **updates**. My work on these games included:
 - Redesigned **core loops** and **progression structures** for F2P mobile games to improve **retention** and monetisation.
 - Designed, implemented, and balanced gameplay features in **Unity** with Git (SourceTree) across **runner**, **racing**, **puzzle**, and **tower defence** games.
 - Designed levels, tutorials, reward pacing, and **difficulty curves**, iterating through hands-on gameplay validation alongside QA.
 - Implemented **analytics events** to support player-behaviour analysis and data-informed iteration.
- Selected Titles: Skull Towers and Xtreme Racing 2.
